The above data are measured at TA=25°C, humidity <75%, nominal input voltage 230VAC and rated output load unless otherwise specified.		
Ripple and noise measurement method: a 300mm twisted pair wire is used, and the terminal should be connected in parallel with a 0.1uF high-frequency ceramic capacitor and a 47uF electrolytic capacitor, and measured at 20MHz bandwidth.		
The power supply is regarded as a component in the system and needs to be verified for electromagnetic compatibility with the terminal device.
